- **Thickness:** 1.75 in. (4.4 cm)
- **Transducer:** Micro Stain Gauge
- **Measurement Range:** 1 - 99 mmHg
- **Power Source:** Tono-Pen AVIA VET Powercel Battery Pack

TONOVET

The **TonoVet** is a handheld and portable **Veterinary Tonometer** featuring new technology which allows rapid and accurate measurement without anesthetic, without anxiety! With TonoVet, a very light probe is used to make momentary contact with the cornea. The measurement is barely noticed by the patient, and often does not even cause corneal reflex.

- No anesthetic is needed.
- Enables rapid intraocular pressure measurements to be made from various species
- Features calibration tables for cat/dog and horse.
- The device is small, handheld and portable.
- The method is clinically tested and accurate, and the force applied to the eye is very small.
- The single-use, disposable probe guarantees microbiological safety.

TONOVET is intended for use by general veterinary practitioners, veterinary ophthalmologists and other veterinary medical personnel.

MODEL J1000 TonoVet Veterinary Tonometer
(includes 100 probes)
